INNOVATION AND *Creativity*

B Tile produces more than 6 million m² of tiles per year, supported by avant-garde machinery for the creation of surface graphics and post-manufacturing processes, as well as a modern laboratory committed to the research and development of new technological and aesthetic solutions. All the phases of our production process undergo strict Quality Control procedures and the excellent quality standards of our products are certified by the most important international certifications.

Beauty

Marble is created beautiful; by loving and understanding it we discover its authenticity and emphasize all its charm. Every inch is different from the next, moving in a flow of endless and untraceable shades.

Nature

Nature gifts us with pieces that are all different from one another. As in a painting, different tones, color intensity and shades that represent typical features of natural products enhance their timeless beauty.

Characteristics

The geologic complexity of stone emerges in the structure variation between blocks. This is the reason why natural products intrinsically show their individual characteristics, featuring differences of color, movement, resistance and flexibility; hence the presence of a natural level of imperfection primarily contributes to the material's character and enhancement.
